SUMMARY

Parents today often prioritize social connections over educational values when selecting schools for their children. This trend raises questions about the true purpose of education and encourages parents to clarify their priorities and expectations.

- Many parents choose schools based on their social circles rather than educational goals.*
- Schools are increasingly viewed as networking opportunities rather than places for learning.*
- Parents should consider the fundamental purpose of education when selecting a school.*
- Extended hours and play-based curricula are valid considerations for working parents.*
- Writing down educational priorities can help parents ask the right questions during school selection.*
- Clarity in what parents are looking for can lead to more informed decisions about education.*

do you think parents today are overthinking education they're not thinking parents today are thinking about their Social Circle when they choose a school they're not thinking why am I sending the child to school I meet so many parents and the only way of deciding a school is where is my friend sending his or her child to the school would it be wrong to say we are thinking

of schools as networking playgrounds absolutely when they're choosing a school I would like them to think what's the purpose of Education why am I actually sending my child to school when parents write to us that you know we're both working and we want school which has extended hours of play or curriculum is it wrong to look at all of these as parameters absolutely not wrong what I'm actually trying to say is have it pened down you should know what you're looking

for because the moment you pen it down that is when you're able to look at a school and then ask the right questions absolutely
